(COUL ) CSIR COUNCIL SCI IND RES.

WPI; 2000-516032/47. N-PSDB; AAA37632. Hybrid streptokinase-fibrin binding domain polypeptides useful for thrombolytic therapy comprises a streptokinase fused with fibrin binding domains of human fibronectin.

Example 3; Fig 6; 58pp; English.

This sequence represents a human fibronectin fragment, containing fibrin binding domains. The invention relates to a hybrid plasminogen activator (PA) comprises a polypeptide fusion between streptokinase (SK), which are capable of plasminogen (FG) activation, and fibrin binding regions of under the procession, which are from fibrin binding domains (FBD) 4 and 5 or 1 and 2. The hybrid PA possesses the ability to bind with fibrin independently and also characteristically retains a FG activation ability which becomes evident only after a pronounced duration, or lag, after stopoure of the PA to a suitable animal or human FG. The hybrid streptokinase-fibrin binding domain polypeptides are useful in

                                                                                                                                                                                                                                                                               ö
           hybrids have enhanced fibrin selectivity as well as kinetics of plasminogen activation that are distinct from that of natural streptochiases in being characterised by a temporary delay, or lag of several minutes in the natural rate of the catalytic conversion of plasminogen to plasmin (i.e. delayed-action thrombolysis). The proteins can bind tightly with fibrin in blood clots soon after introduction into blood plasminogen to plasmin, thus saiding in the localisation of the plasminogen activation process to the site of pathological thrombus. This overcomes systemic plasminogen activation ectivation ectivation encountered during clinical use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Proteins with cell migration stimulatory activity used in treating wound
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides a human migration stimulatory factor (MSF) protein. Host cells containing a replicable vector comprising the MSF encoding nucleic acid can be used for the recombinant production of the protein. The polypeptide can be used for modulating cell migration, healing a wound and for preventing scarring. The present sequence represents the human fibronectin
thrombolytic therapy for various kinds of cardiovascular disorders. The

                                                                                                                                                                                        Human fibronectin (AAR92778) has a fibrin-binding site, close to the C-terminus (amino acids 2123-2232 or 2141-2230), covering the 10F1.11F1 module pair of the protein. Fibrin-binding sites can be prepd. by enzymatic cleavage of fibronectin, peptide synthesis or by recombinant DNA techniques. They are used to detect a fibrin-binding target site, to treat disorders involving abnormal fibrinolysis or fibrinogenesis, to disrupt blood clots and to aid delivery of medicaments to fibrin- contgines. They show high affinity to and slow dissociation from fibrin, and

The invention relates to obtaining a population of quiescent haematopoietic cells (HG), comprising culturing HC while adhering the cells to a pollypeptide having a very late antigen-4 (VLA-4) binding site, in particular fibronectin polypeptide, so as to expand the number of HC. Where the adhering provides an increased percentage of quiescent HC. Also included are inducing apoptosis of a subpopulation of HC, by contacting the cells with a polypeptide having a VLA-4 binding site under conditions to cause apoptosis of a subpopulation of HC and a medium for culturing HC which enriches quiescent HC, comprising a fibronectin polypeptide. The method is useful for obtaining a cell population containing quiescent haematopoietic cells which are useful for treating a subject. Use of the VLA-4 containing peptide is useful for inducing apoptosis of a subpopulation of CD34+ HC population. The present sequence is human fibronectin which contains then VLA-4 binding site used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modulating proliferation of erythroid progenitor cells in a hematopoietic cellular population by culturing with polypeptides containing an integrin very late antigen 5 or 4 binding site, useful in treating erythroid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method for enhancing proliferation or inducing apoptosis of erythroid progenitor cells (EPCs). The method involves culturing haematopoietic cellular populations containing EPCs in the presence of a polypeptide having an integrin very late antigen (VLA)-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; proliferation; apoptosis; erythroid progenitor cell; EPC; VLA; integrin very late antigen; haematopoietic cell; induced disorder; genetic disorder; congenital erythroid disorder; polycythaemia; anaemia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
use in treating a subject, by expanding the cells while adhered polypeptide containing binding sites for integrins on the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

5 or VLA-4 binding site. The EPCs are useful for treating patients having induced, genetic or congenital erythroid disorders. Methods of the invention are useful in diagnostic assays of progenitor cells, e.g. cells occurring in pathologic states such as anaemia or polycythaemia and in the study of erythroid cell development. They are used in the screening of agents which inhibit or prevent apoptosis of erythroid cells. The present sequence is a human protein related to the modulation of proliferation of EPCs. This sequence is used in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The product may be expressed from a transformed micro-organism, esp. E.coli. FN binds to fibrin, heparin and Staphylococcus aureus, and may be used to target a therapuetic agent onto natural fibrin eg. a blood clot. It may also be used in affinity purification of a polypeptide, conjugated to the collagen binding site of FN and immobilised on a collagen surface. (Updated on 25-MAR-2003 to correct PA field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New fibronectin polypeptide sequence with affinity for collagen etc. - useful for targetting therapeutic substances on natural fibrin, for use in affinity purificn. of polypeptide(s) etc.

                                                                                derive polypeptides which are identical to part of the fibrin- binding domain (FBD) of fibronectin. These polypeptides can be used to inhibit thrombus formation, or (coupled to a thrombolytic agent) to induce thrombolytis agent, or to treat wounds, e.g. in skin, eyes or tendons (in conjunction with a polypeptide which includes a part of the cell-binding domain (CBD) of fibronectin). These polypeptides are easier to prepare than the full 31kD polypeptide. It can also be used to image fibrincontg. materials, esp. a thrombus or athero- sclerotic plaque, pref. using a gamma counter. (Updated on 25-MAR-2003 to correct PI field.)
                                                             The amino acid sequence is that of human fibronectin, this can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .;

The invention describes genes (1) which are differentially regulated in prostate cancer. (2) Is useful for diagnosing a prostate cancer in a sample comprising prostate tissue, which involves determining the number of target genes which are differentially-regulated in the sample, where to target genes which are differentially-regulated in the sample, where to prostate cancer. (3) Is useful for assessing a therapeutic or preventive intervention in a subject having a prostate cancer, which involves contention in a subject having a prostate cancer. Which involves contention a subject having a prostate cancer coft target genes which are differentially-regulated in prostate cancer. Preferably, the expression levels of at least 10 genes are determined. (1) is also useful for identifying agents that modulate a biological activity of a polypeptide differentially-regulated in prostate cancer. (2) activity of a polypeptide differentially-regulated in prostate cancer cells with a test agent under conditions effective for the test agent to modulate a biological activity of the polypeptide, and determining whether the test agent modulates the biological activity. (1) is useful as molecular markers, as drug targets, and for detecting, products are used in the diagnostic test to assay for presence of cancer. (2) products are used in the diagnostic test to assay for presence of cancer e.g., in tissue sections, in biopsy sample, in total NN, in lymph, in blood etc. (1) is useful for assessing cancer e.g., to determine the type of cancer, its stage of development, the nature of genetic defect, etc. (2) is useful and also seems of genes at rarget for therapy or drug discovery. (1) can also be used for expressing the polypeptide and thus concerning especially relevant prostate cancer. The identification of specific genes, and groups of genes, expressed in pathways which are useful in disagnostic, therapeutic, and clinically relevants in the properties of genes, and groups of genes are prostate cancer. The identification of applicat
                                           Novel genes which are differentially regulated in prostate cancer, useful for diagnosing prostate cancer in prostate tissue sample and assessing therapeutic or preventive intervention in prostate cancer patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; high bone mass; HBM; LRP5; LRP6; transgenic; bone mass modulation; gene therapy; bone density modulation; bone strength; trabecular number; bone size; bone tissue connectivity; bone disease; osteoporosis; osteomalacia; rickets; Paget's disease; neoplasm of the bone.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes the human Zmax1 gene and the high bone mass (HBM) gene, which are found on chromosome 11q13.3. The Zmax1 and HBM genes have osteopathic activities. The genes can be used in gene therapy, antisense therapy and in the production of vaccines. They can be used in the diagnosis and treatment of bone disorders including osteoporosis, the diagnosis, solerostosis, osteomalacia and fibrous dysplasia.

given in ARR92047 to ABR92164. A higher level of expression of (1) than normal indicates the presence of cervical cancer. Also described: (1) a setsets the presence of cervical cancer. Also described: (1) as sessessing (II) whether a patient is afflicted with cervical cancer. Comprising comparing the level of expression of a marker in a patient's sample, and the normal level of expression of the marker in a control non-cervical cancer sample, where a significant increase in the level of expression of the marker in the patient's sample relative to that in the control sample is an indication that the patient is afflicted with cervical cancer. (1) has cytostatic activity, and can be used in gene therapy and in vaccines. (1) is useful in detecting, characterising, preventing and treating human cervical cancers. (1) may also be used in wonitoring clinical trials
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated nucleic acid molecule useful for detecting, characterizing, preventing and treating human cervical cancers, in various prognostic and diagnostic assays, in pharmacogenomics and in monitoring clinical trials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ACF12828 to ACF12947 encode the human cervical cancer marker proteins (I)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PRINCE SERVICE SERVICE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to novel transgenic animals expressing the high bone mass (HBM) gene, expressing the corresponding wild type HBM gene, comprising an alteration of the gene encoding LRP5 or LRP6, or expressing an LRP5 that is modulated by an altered gene control sequence introduced by homologous or non-homologous recombination. The transgenic animals are for the study of bone density modulation or bone mass modulation. The invention may have a use in gene therapy. The transgenic animals and nucleic acids are for the study of bone density modulation, where the one mass is modulated relative to non-transgenic animals of the same species in more than one parameter selected from bone density, bone strength, trabecular number, bone size, or bone tissue connectivity. The stransgenic animals, nucleic acids and methods are useful for identifying molecules involved in bone development, and for developing phermaceutical compositions, which may be employed for treating or preventing bone diseases, e.g. osteoporosis, osteomalacia, rickets, Paget's disease, or neoplasms of the bone. The transgenic animals and nucleic acids are also useful in methods for disquesting on mass. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New transgenic animals (e.g. mice), useful as models for studying bone density modulation, developing drugs for treating or preventing bone diseases (e.g. osteoporosis), or diagnosing diseases characterized by reduced bone density.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; cervical cancer; cervical cancer marker; cancer therapy; detection; gene therapy; vaccine.

                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                                                                                                                   The present invention describes a method (MI) for diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, or determining the prognosis or outcome of a cancer patient. Mi involves providing a set of genes that are differentially expressed in cancerous or non-cancerous conditions, determining the expression levels of the set of genes and calculating a ratio of the expression levels of the differentially expressed genes. Mi is useful for diagnosing the presence of cancer cells or non-cancer cells in a useful for diagnosing the presence of cancer cells or non-cancer cells in a usewe sample, where the cancer is malignant pleural mesothelioma (MPM), lung adenocarcinoma, squamous carcinoma, cancer pleural mesothelioma (MPM), lung adenocarcinoma, squamous carcinoma, prognosis or outcome of a cancer breast cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, diffuse large B-cell lymphoma, follicular lymphoma and ovarian cancer, differentially expressed genes is used as an indicator of cancer type, cancer class, and/or cancer prognosis, all of which are useful for determining a course of treatment of a patient. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                             Diagnosing cancer cells in tissue sample, or determining prognosis or outcome of cancer patient, by calculating ratio of expression levels of genes that are differentially expressed in cancer and non cancer tissues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                  The present invention relates to High Bone Mass (HBM), LRP5 (Zmax1) and LRP6 mutants, which results in a HBM-like phenotype when expressed in a cell. The HBM-like phenotype results in bone mass modulation and/or lipid level modulation. The invention is useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject suffering from e.g. osteoporosis. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Regulating LRPS, LRP6 or HBM activity in a subject, useful for modulating lipid levels and/or bone mass, and for in treating bone mass disorders, e.g. osteoporosis, comprises administering a composition which modulates a Dkk activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 he present invention relates to regulating LRP5, LRP6 or HBM activity subject comprising administering a composition which modulates a Dkk
New nucleic acid comprising a mutation in LRP5 or LRP6, useful for diagnosing a HBM-like phenotype in a subject and for preparing a composition for modulating bone mass and/or lipid levels in a subject

activity. The method is useful for modulating lipid levels and/or bone mass, and is useful in treating or diagnosing abnormal lipid levels and bone mass disorders, such as osteoporosis, bond fracture, age-related loss of bone, a chondrodystrophy, drug-induced bone disorder, high bone turnover, hypercalcaemia, hypercostosis, osteogenesis, imperfecta, osteomalacia, osteomyellitis, Paget's disease, osteoarthritis, and rickets. Modulators of Dkk activity are useful for as reagents in studying bone mass and lipid level modulation, in modulating Wht signaling, or treating Dkk-mediated disorders. The present sequence represents a human protein sequence related to the invention.

                                                                                                                                                                                                                                                                                                                                                                     ò
```

The invention relates to a method of diagnosing the presence of cancer cells or non-cancer cells in a tissue sample, determining prognosis or outcome of a cancer patient, selecting a course of treatment for a subject having or suspected of having malignant pleural mesothelioma (MPM) and evaluating treatment of MPM comprising determining the ratio of the expression level of a set of genes differentially expressed in a cancer is chosen from MPM, lung adenocarcinoma, squamous carcinoma, medulloblastoma, prostate cancer, breast cancer, affitues large B-cell lymphoma, follicular lymphoma and ovarian cancer. The method is useful for diagnosing MPM in a subject suspected of having MPM which involves obtaining a tissue sample suspected of being cancerous

Diagnosing the presence of cancer or non-cancer cells in tissue sample, useful for diagnosing malignant pleural mesothelioma comprises determining ratio of expression level of a set of genes expressed in

C; Comment: The transit peptide is removed from the nuclear-encoded precursor during tranidoxal phosphate; it catalyzes the formation of 5-aminolevulinic acid from succinyl CoA C; Superfamily: 5-aminolevulinate synthase; glycine C-acetyltransferase homology
C; Keywords: acyltransferase; coenzyme A; mitochondrial matrix; mitochondrion; phosphoprof; F; 1-8/Pommain: transit peptide (mitochondrion) #status predicted <TRM>F; 9-586/Product: 5-aminolevulinate synthase #status predicted <MAT>
F; 193-533/Domain: glycine C-acetyltransferase homology <GCA>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            C;Accession: S16347; S13683—

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    οĘ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IsoId=P11276-1; Sequence=Displayed;
TISSUE SPECIFICITY: Plasma FN (soluble dimeric form) is secreted by hepatocytes. Cellular FN (dimeric or cross-linked multimeric forms), made by fibroblasts, epithelial and other cell types, is deposited as fibrils in the extracellular matrix.
INDUCTION: Glucocorticoids suppressed mRNA expression and protein
                                                                                                                                                                                                                                                                                                                                                                                 Polly P., Nicholson R.C.; "Sequence of the mouse fibronectin-encoding gene promoter region."; Gene 137:353-354(1993).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Event=Alternative splicing; Named isoforms=1;
Comment=A number of isoforms are produced. Each of the "extra
domain" and the connecting strand 3 are present in some forms
fibronectin and absent in others;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            TISSUE=Kidney;

RT "Identification and characterization of alternatively spliced fibronectin mRNAs expressed in early Kenopus embryos.";
RI FUNCTION: Fibronectins bind cell surfaces and various compounds CC including collagen, fibrin, heparin, DNA, and actin. Fibronectins are involved in cell adhesion, cell motility, opsonization, wound CC healing, and maintenance of cell shape (By similarity).

CC -1- SUBUNIT: Dimers or multimers of alternatively spliced variants, connected by 2 disulfide bonds near the carboxyl ends (By anilarity). CC -1- not the "extra of the "extra o

                        Insoid=091740-1; Sequence=Displayed;
-!- TISSUE SPECIFICITY: In early Xenopus embryo, cellular forms of fibronectin predominate which include both extra domains. In fibronectin of embryonic and adult liver the connecting strand can be either completely excluded or included.
-!- SIMILARITY: Contains 12 fibronectin type I domains.
-!- SIMILARITY: Contains 2 fibronectin type III domains.
-!- SIMILARITY: Contains 17 fibronectin type III domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (extra domain)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (extra domain)

Sequence 677, Application US/10680287A

PUDIcation No. US20040244069A1

GENERAL INFORMATION:

APPLICANT: Babij, Philip

APPLICANT: Bex, Frederick J. III

APPLICANT: Bex, Frederick J. III

APPLICANT: Bec, Reder Van Nest

TITLE OF INVENTION: Transgenic Animal Model of Bone Mass Modulation

FILE REFERENCE: 032796-179

CURRENT APPLICATION NUMBER: US/10/680,287A

CURRENT FILING DATE: 2003-10-08

PRIOR PILING DATE: 2002-05-13
